

Case Study: Chesapeake Energy Pond Liner Recycling

The Problem

- The increase in hydraulic fracturing has left oil and gas companies like Chesapeake Energy searching for a solution to recycling plastic used in pond liners
- Oilfield plastic is most often taken to a landfill for disposal
- Plastic is often wadded and bunched into waste hauling trucks, requiring 10+ truckloads to remove the plastic from the job site

Current Freight Needed

The Solution

- Delta Plastics developed proprietary cutting/rolling equipment to consolidate the volume of plastic removed at the job site
- Used plastic can now be easily removed and hauled to our recycling facility

Large fracking pond

Proprietary rolling equipment

Consolidated Roll

Innovative Solution Removes 80% of the Volume and Freight

- By consolidating the plastic volume, Delta Plastics removed the need for 10 truckloads down to only 2
